

Four Solution for Church LED Screen Project

First Proposal: P3 Simple Cabinets (fixed on the wall)

Also
seamless
installation

Main
power/signal
cables through
the holes at the
side of cabinets

There are four
screw holes at the
edge of each
cabinet, just mount
it with screws on
the wall.

Second Proposal: Die-casting aluminum cabinets with fully front service (fixed installation on the wall)

Not only led modules, you can also take out receive card/power supply from the front.

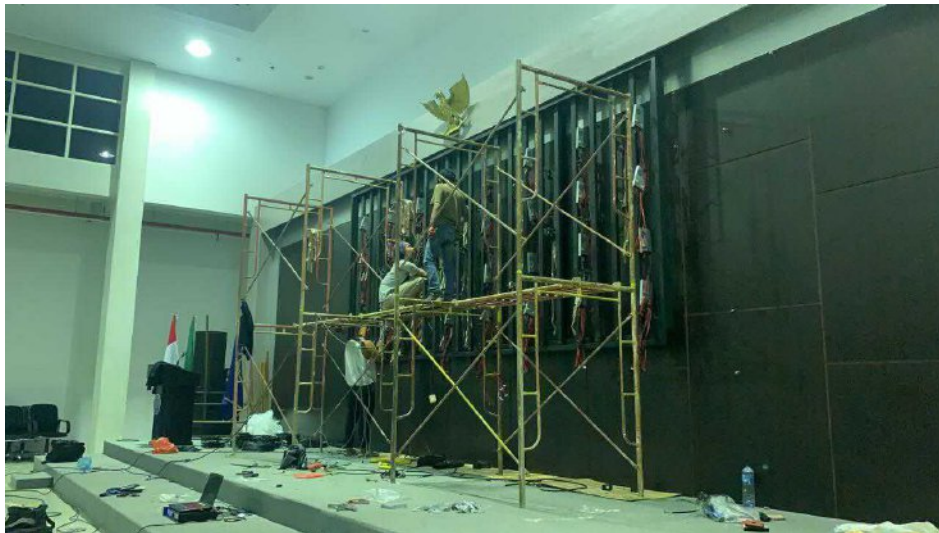

The second and the first proposal almost do in the same way.

- 1) Mark the position for screws hole and insert the expansion screws
- 2) Take out the led modules and place led cabinet on the screws
- 3) Mount led cabinet tightly
- 4) Place led modules on it
- 5) Get the power to it, and you can start rock n roll

Third Proposal: Placing Magnetic LED Modules on Steel Structure
Kindly check below reference from our Indonesia clients, we will offer led modules/power supplies/receive card and necessary cables to you.

Proposal 4th: Hanging Installation

Kindly check below pictures which are from our client's feedback:

Church Project in Georgia,US
